

GenAI Intern Assignment

Location: Noida/Hybrid | Internship (3 months) | Path to Full Time

Task

Build a GenAI-powered solution to generate an up-to-date calendar of sports tournaments across the following sports:

Cricket, Football, Badminton, Running, Gym, Cycling, Swimming, Kabaddi, Yoga, Basketball, Chess, Table Tennis

Levels to cover

Corporate, School, College/University, Club/Academy, District, State, Zonal/Regional, National, International

Bonus points for including local tournaments.

Output format (CSV or JSON)

- Tournament Name
- Level
- Start Date
- End Date
- Tournament Official URL
- Streaming Partners/Links
- Tournament Image
- Summary of Tournament (max 50 words)

Guidelines

- Use any tools, APIs, or LLM prompts necessary to gather and organise the data.
- Share your approach and system design; how you collected the data, ensured accuracy, and handled scalability or edge cases.
- Mention any limitations or areas for improvement.
- Bonus: Include a basic API or UI mockup that consumes this data.
- The data needs to be updated for use by the end users.

Feel free to share your assignment in whichever format you prefer.

Upload your responses on this [LINK](#) along with other information

Instructions

- 1) Use a simple in-memory storage (or SQLite/MySQL) to organise tournaments.
- 2) UI mockup can be plain HTML + JS/jQuery (no React needed unless confident).
- 3) Rate output on completeness, clarity, and relevance.

Output in Zipped folder:

- 1) Codebase
- 2) Sample DB schema/table design (if used)
- 3) README.md with setup & run instructions
- 4) Sample output

Bonus

- 1) API to serve this data (GET /tournaments)
- 2) UI mockup or working demo to display results
